

ARYAN MADHUR HAMINE

[Devfolio](#) | haminearyan@gmail.com | github.com/chanchanmano | linkedin.com/in/aryan-hamine

Davis, CA | +1 (530)-376-9849

UC Davis Computer Science graduate student with **2.5 years of experience** building **production-scale SaaS**. Experienced in architecting **robust REST services**, **microservices** based implementations, **event driven integrations**, using **Python, Django, Node.js, and React**. Proficient in database modelling (**PostgreSQL/MySQL**), caching (**Redis**), and search indexing (**Elasticsearch**) with working knowledge of **AWS**-based deployments and containerization via **Docker**.

EDUCATION

University of California, Davis , USA

September 2025 – June 2027 (Expected)

Master of Science in Computer Science

Key Coursework : Distributed Database Systems, Machine Learning and Discovery

MMCOE, Pune University (SPPU), India

August 2019 - April 2023

Bachelor of Engineering in Information Technology

(GPA 3.7/4)

Key Coursework : Data Structures and Algorithms, Operating Systems, Cloud Computing, Software Engineering

PROFESSIONAL EXPERIENCE

CreliaHealth, Pune, India | Software Engineer (SDE-II)

April 2023 – August 2025

- Engineered **Storage Manager**, a unified Django REST service **handling 1M+ uploads** with **Elasticsearch indexing** and MySQL-based lab tracking; achieved **~40% faster throughput** and complete upload traceability
- Enabled 10k+ patients/month** to access medical imaging and **reduced support tickets 30%** by shipping a secure PACS/DICOM sharing portal with authenticated links and audit logs
- Eliminated manual webhook recovery** and increased **integration reliability by 95%**, **saving 20+ engineer-hours weekly**, by replacing Mirth-based retry workflows with a **Django-DocumentDB integration dashboard** and an **auto-retry mechanism** that re-executed failed webhooks using recorded state data and **AWS EventBridge** scheduling
- Reduced billing errors** and eliminated manual steps by **automating reflex-testing rules** over MySQL and **caching thresholds in Redis** for real-time evaluation
- Developed **Smart Reports**, a **configurable, component-based report builder** replacing rigid templates; owned the dynamic React frontend, built backend APIs for metadata-driven composition, and co-architected the system for long-term scalability.

Outshade Digital Media, Hyderabad, India (Remote) | Full Stack Developer Intern

January 2022 – March 2022

- Delivered **client-management dashboard** (Node.js + MySQL) consolidating diverse client data and adding a **rule-based reminder scheduler**, improving task follow-ups
- Delivered a **clinic management application** built on the **MERN stack** that could allow health clinic receptionists to register patients and follow up on **patient appointments**; provisioned the ability to upload patient files using **AWS-S3**

PROJECTS

Drug Supply Chain Tracking on a Decentralized Network

- Built a **React and Node.js-based web3 application** aimed at securing the transaction of goods in a drug supply chain in a **real-world setting** involving various participating actors.
- Led development of smart contracts in **Solidity** with backend logic using Node.js, and DB Schema in **MongoDB**
- Authored and **published a paper** on the extensive project in the Indonesian Journal of Electrical Engineering and Computer Science (IJECS) in January 2024, Volume 33, Issue No. 1, ISSN: 2502-4752

A.L.A.N (Advanced Logic and Associative Neural-net)

- Built a **modular assistant prototype** with **wake word detection** (Porcupine), speech-to-text (Whisper), text-to-speech (Edge TTS), and **LLM-based response** generation (Groq Mixtral via **LangChain**), and session-based memory
- Designed an **extensible architecture** using ports/adapters to allow future swap-in of different **STT, TTS**, and wake word engines
- Architected the system for extensibility, enabling **autonomous routines** (e.g., reminders, notes, self-triggered tasks) through modular adapters and persistent memory support

SmashingBugs – Ticket Tracking Platform for Organizations

- Developed a full-stack **Django REST Framework** backend with **JWT authentication**, **role-based access control**, and modular APIs using ViewSets and serializers
- Designed a **PostgreSQL-backed**, Dockerized architecture with isolated environments and reproducible builds via **Docker Compose** and **Makefiles**
- Integrated a responsive **ReactJS frontend** consuming REST APIs for seamless real-time ticket management

TECHNICAL SKILLS

- Programming Languages:** Python, JavaScript - TypeScript, Java, Solidity
- Frameworks:** Django, Node.js , Electron, Express, ReactJS
- Database Technologies:** MySQL, PostgreSQL, MongoDB, Redis, Elasticsearch
- Cloud & DevOps :** AWS (S3, Lambda), Docker, Git/Github
